Part B: Bug Report

JobTrack · Export to CSV · logged 6 October 2026

Title

Export to CSV fails with "Something went wrong" error when the batch search is filtered by client Hope & Harvest Bank (JobTrack v3.4.1)

Reported by

Name	**Thandiwe (Thandi) Mokoena**
Role	Production Supervisor, Floor 2
Contact	Ext. 2214
Reported via	Email to IT Support, Tuesday 6 October 2026, 11:58
Logged by	Rinae Tshivhase, IT Support

Date and time

Tuesday **6 October 2026**, local time (SAST):

Time	Attempt	Browser	Result
10:42	1	Chrome	Error page, **Ref: 7F3A-22C1**
Between 10:42 and 10:51 (exact time not given)	2, after closing and reopening Chrome	Chrome	Error page, **Ref: 9B10-04DE**
10:51	3	Edge	Same error page (reference number not given)

Environment

Application	**JobTrack**
Version	v3.4.1, as shown in the page footer. The user believes it was v3.3 last week (unconfirmed).
URL	`https://jobtrack.bluprnt.local/batches/search` (opened from the user's bookmark)
Browsers	Google Chrome and Microsoft Edge (versions not known)
User account	`thandiwe.m`
Network	Office network, Floor 2. The user reports the Wi-Fi has been slow this week.
Operating system	Not stated

Preconditions

1. The user is logged in to JobTrack as `thandiwe.m` (or another account with permission to search and export batches).

2. The client **Hope & Harvest Bank** has batches dated between 1 and 5 October 2026. The user's search returned about 14.

Steps to reproduce

1. Open `https://jobtrack.bluprnt.local/batches/search` in Chrome.
2. Log in as `thandiwe.m`, if not already logged in.
3. In the **Client** dropdown, select **Hope & Harvest Bank**.
4. Set the date range **from 1 October 2026 to 5 October 2026**.
5. Leave **Status** set to **All**.
6. Click **Search**. The results load correctly (about 14 batches).
7. Click the green **Export to CSV** button at the bottom of the results.

Expected result

A CSV file downloads containing the same batches shown in the search results: Hope & Harvest Bank, 1 to 5 October 2026, all statuses (about 14 batches).

Actual result

No file downloads. The browser shows a white page with the text:

```
Something went wrong. Please contact support. Ref: 7F3A-22C1
```

Each attempt shows a different reference number (`7F3A-22C1` at 10:42, `9B10-04DE` on the second attempt). The search itself works; only the export fails.

Reproducibility

3 out of 3 attempts failed for the Hope & Harvest Bank search: twice in Chrome (including after restarting the browser) and once in Edge.

Scenario	Result
Client = Hope & Harvest Bank, 1–5 Oct, Status All, Export	**Fails** (3/3)
Same search, but Client = Kaya Bank, Export	Works
No client filter (all clients), Export	Works (on 5 October, and again today as the workaround)
Hope & Harvest Bank with a client filter, on any earlier day	**Unknown.** The user first thought it worked yesterday, then corrected herself: yesterday she exported all clients, not Hope & Harvest alone.

Not yet tested: other date ranges or status filters for Hope & Harvest, other users, and other clients.

Priority

P2 Major. Delivery of the Hope & Harvest Bank reconciliation file to the client by **14:00 today** is at risk, but a manual workaround exists, so it does not fully meet P1 ("no workaround").

Escalate to P1 if the workaround cannot be completed accurately before 14:00, or if other users or clients are affected in the same way.

Impact and workaround

Impact

- The Production Supervisor cannot export the Hope & Harvest Bank reconciliation file directly from JobTrack.
- The file must reach the courier by **14:00 on 6 October 2026**, or the delivery to the client is missed.
- Anyone who needs a filtered Hope & Harvest Bank export is probably affected (not yet confirmed).

Workaround in use

- The user exports **all clients** (this works) and manually deletes every non–Hope & Harvest row in Excel.
- This is slow and error-prone. The user is worried about getting the record counts wrong, which is a data-accuracy risk for a client deliverable. The cleaned file should be checked against the search results (about 14 batches) before it is sent.

Evidence

Already available

- Screenshot of the error page, attached to the user's email. It's not stated which attempt it shows.
- Error reference numbers: `7F3A-22C1` (Chrome, 10:42) and `9B10-04DE` (Chrome, second attempt).
- The times of all three attempts.

To be collected

- Application and server logs for references `7F3A-22C1` and `9B10-04DE`, around 10:42–10:51 on 6 October 2026. These should contain the actual exception and stack trace.
- The reference number from the Edge attempt at 10:51, if the user still has it.
- Web server or proxy logs for the export request: the full request URL and query string, and the HTTP status code.
- Deployment records: when v3.4.1 was released, and the release notes for any changes to search or export.
- A test of the same export by IT, from a different account and machine, to confirm it is not specific to this user.

Notes

Observations

- The search returns results correctly; only the export step fails.
- The error page shows a support reference number, which suggests the application caught a **server-side** error.
- The same failure happens in two different browsers and after restarting the browser.
- The export works for another client (Kaya Bank) and with no client filter.
- The Export button changed colour (blue to green), and the version number appears to have changed (v3.3 to v3.4.1), which suggests the export feature changed recently.

Hypotheses (not confirmed)

1. **Not a network, PC or browser problem.** It fails in two browsers, the search on the same page works, and other exports work. Slow Wi-Fi would not explain a server error page with a reference number.
2. **The ampersand ("&") in "Hope & Harvest Bank" breaks the export.** Kaya Bank has no special characters and works, and the unfiltered export (no client name involved) also works. If the export passes the client name in a URL query string without encoding it, the & would cut the name short ("Hope ") and the server would fail. The same problem could happen if the client name is used in the CSV file name or

download header. This is the first thing to check in the logs.

3. **Something in Hope & Harvest Bank's data for 1–5 October breaks CSV generation**, for example a special character or empty value in one of the 14 batches. This is less likely than hypothesis 2, but can be tested by exporting a smaller date range.
4. **A regression in v3.4.1.** If the export was changed in this release, the bug may have been introduced then. The user can't confirm a filtered Hope & Harvest export ever worked, so this needs checking against an earlier version or the change history.

Data volume is unlikely to be the cause: 14 batches is small, and the much larger all-clients export works.

Questions for the user

1. Which attempt is the attached screenshot from, and do you still have the reference number from the Edge attempt at 10:51?
2. Have you ever successfully exported **Hope & Harvest Bank on its own** (with the Client filter), in any version?
3. Does the export work for Hope & Harvest Bank with a different date range (for example, a single day) or a different Status?
4. Are you aware of anyone else who has had this error, for example when exporting Hope & Harvest Bank or another client with "&" or other symbols in its name?
5. How many batches exactly did the search show for Hope & Harvest Bank, 1–5 October? (This helps check the workaround file.)
6. Your subject line says "broken AGAIN". Has this export failed before, and if so, roughly when?

Reply to the user

Hi Thandi, thank you for the detailed email and the reference numbers, they're exactly what we need, and I'm sorry this is happening on a deadline day. I've logged this as a priority issue and passed it to the development team. Because the Kaya Bank export and the all-clients export both work, it looks like a problem inside JobTrack with this particular export, not your PC, your browser or the Wi-Fi. For the 14:00 courier, please carry on with the all-clients export, and before you send it, check that the Hope & Harvest rows match the number of batches your search showed. I'm happy to double-check the file with you if you call me, and I'll update you by 13:00 either way.
